

EPB1 Plastic Bearings

Product Features

This material is with low water absorb characteristic and high load capacity. It is widely used for the humidity condition and wear resistance requirement. The embedded special metal powder enables this material to be a detective one.

- Continuous working temperature: -50°C – 110°C
- Suitable for medium and high load operation
- Maintenance-free dry operation
- Excellent thermal conductivity

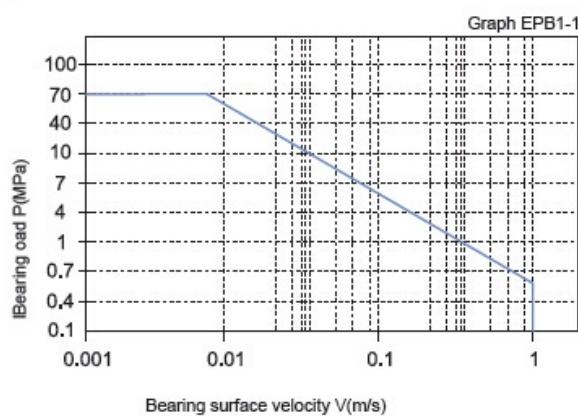

The Material Data Sheet

Common Capability	Testing Method	Unit	EPB1
Color			Red Brown
Density	ISO 1183	g/cm ³	1.51
Dynamic friction /steel (dry)			0.08 – 0.20
Max. PV (dry)		N/mm ² x m/s	0.6
Max. rotating velocity		m/s	1.0
Max. oscillating velocity		m/s	0.7
Max. linear velocity		m/s	3.0
Tensile strength	ISO 527	MPa	80
Compressive strength (Axial)		MPa	75
E-Modul	ISO 527	MPa	2'500
Max. static pressure of the surface, 20°C		MPa	70
Rockwell hardness	ISO 2039-2	HRR	115
Continuous work temperature		°C	-50 – +110
Short-time work temperature		°C	-50 – +170
Thermal conductivity	ASTME1461	W/m*k	0.3
Linear coef. of thermal expansion	ASTMD696	10 ⁻⁵ x K ⁻¹	8
Moisture absorption RH50 / 23°C	ASTMD570	%	0.2
Max. water absorption, 23°C		%	0.5
Flammability	UL94		HB
Volume resistivity	IEC60093	Ωcm	>10 ¹⁴
Surface resistivity	IEC60093	Ω	>10 ¹⁵

PV Value of Bearings

The max PV value of the EPB series bearing is 0.4 N/mm²*m/s which determines the load capacity of bearing is inversely proportional to the speed. Please refer to the chart for more detailed information (Graph EPB-1).

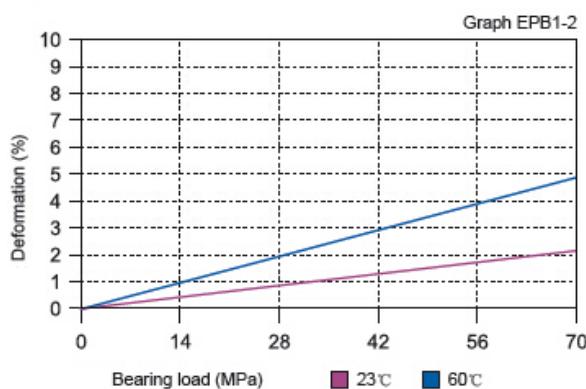

■ Permissible PV

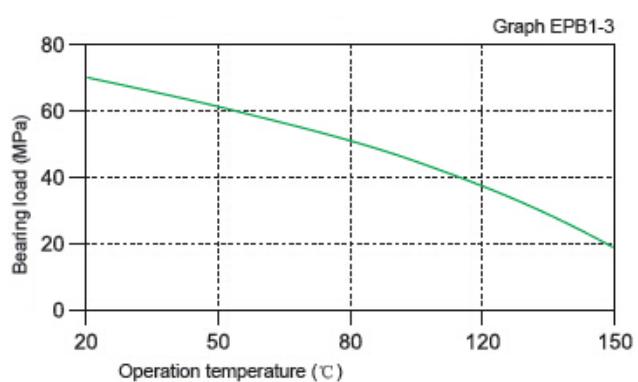

The Relation of Load, Speed and Temperature

EPB1 allows the Max static load of 70 MPa, The max compressive deformation rate under the max load is listed in Graph EPB1-2, The actual load capacity of bearing is slightly less than 70 MPa, The bearing load is variable against the speed and temperature, Fast speed (Vmax: 1.0 m/s) results into higher temperature (Tmax: 110°C) which decreases the load capacity of the bearing. Please refer to the Graph EPB1-3 for such variation.

■ Load-Temperature deformation

■ Load-Temperature diagrams

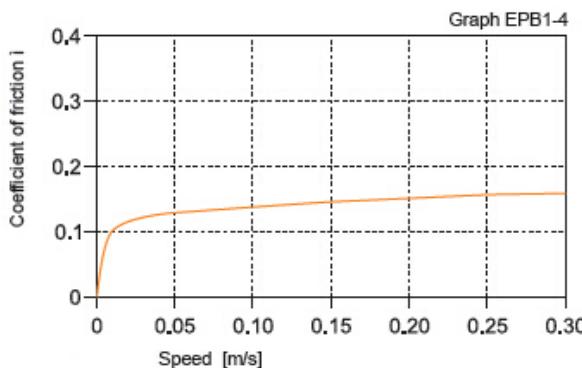

The Relation of Friction Factor, Wearing and shaft material

Friction Factor

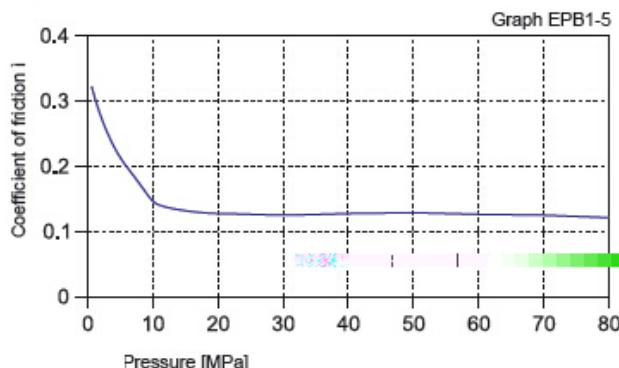

Graph EPB1-4 shows that as the same as most of the slide bearing materials, the friction factor of EPB1 is increasing along with the rotation speed under a certain loading while as shown in figure EPB1-5, it is decreased along with the increasing of loading when the operation speed is stable. From figure EPB1-6, it is found that the most suitable shaft roughness is Ra 0.2 - 0.6. Smoother shaft or rougher shaft may result into friction factor increasing.

EPB	Dry	Grease	Oil	Water
Friction coef. μ	0.08 - 0.20	0.09	0.04	0.04

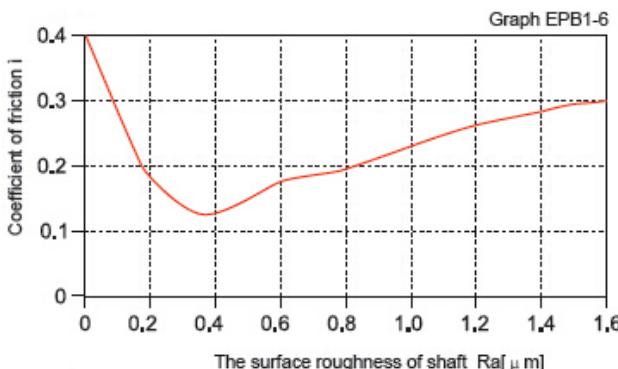

■ Coefficient of friction & the speed of bearing,
 $p = 2 \text{ MPa}$

■ Coefficient of friction & the pressure of bearing,
 $v = 0.2 \text{ m/s}$

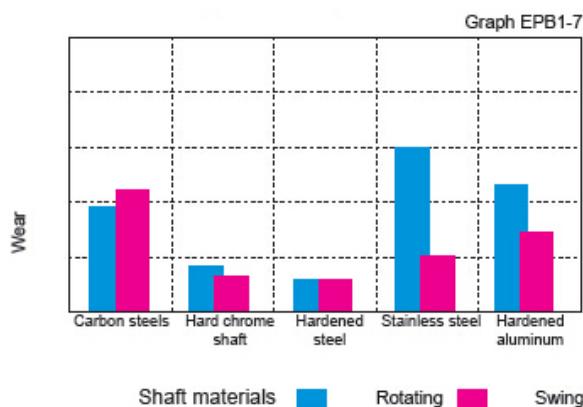

■ Coefficient of friction & the surface roughness of shaft

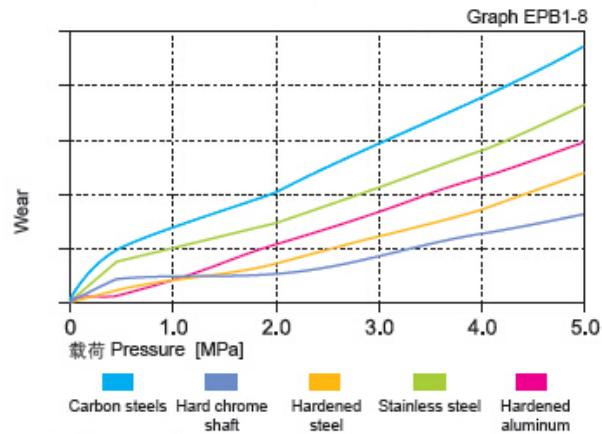

Wearing and shaft material

Graph EPB1-7 shows the wearing is considerably affected by the shaft materials. Heat-treated steel shaft and carbon steel shaft is good for this bearing material. EPB1 is suitable for hardened chrome steel and hardened steel shaft in oscillation operation and is suitable for hardened chrome steel and hardened steel shaft in rotation operation.

■ The bearing wear under rotating with different shaft materials, $p = 2 \text{ MPa}$, $v = 0.2 \text{ m/s}$

■ The bearing wear & pressure under rotating with different shaft materials, $v = 0.2 \text{ m/s}$

Chemical Resistance

EPB1 is good at chemical resistance against weak acidic medium and various kinds of lubricants.

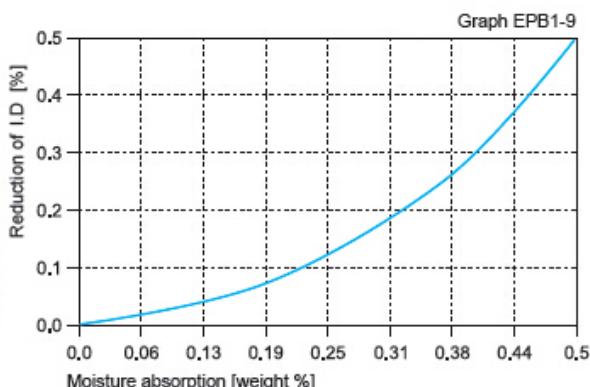

UV Resistance

Disintegration could be possible for the material EPB1 after long period of exposing under the UV ray and therefore the performance of the material will be reduced.

Water Absorbability

The water absorb rate of EPB1 is 0.2% under the atmospheric pressure while it is 0.5% when the material is immersed into water. With its low water absorbability, the material is suitable for humid environment applications.

■ Effect of moisture absorption on EPB1 bearings

NOTES

Data herein is typical and not the maximum values of the material specifications. Unless otherwise specified, all data listed is for all specification products. We reserve the right to change tech-Data without notice due to the improvement of material technology.
